How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9 GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).

How many energy storage projects are there in the world?

It has 9.4 GW of energy storage to its name with more than 225 energy storage projects scattered across the globe, operating in 47 markets. It also operates 24.1 GW of AI-optimised renewables and storage, applied in some of the most demanding industrial applications.

Are energy storage systems positioned to solve the energy transition?

Clean power sources reached 40.9% of global electricity generation in 2024, marking a significant milestone in the energy transition. However, the inherent intermittency of these sources--the sun doesn't always shine, and the wind doesn't always blow--creates a fundamental challenge that energy storage systems are uniquely positioned to solve.
