This encompasses tasks such as engineering and providing support for permitting and regulatory compliance. Alor collaborates with the University of Iceland and Netpartar, an environmentally friendly recycling facility ...

Nanom is an Icelandic deep-tech startup (SME) engineering advanced nanoparticle materials for next-generation batteries. Its patented technology dramatically enhances battery performance and longevity, ...

Setting up the battery-as-a-service (BaaS) framework does seem simple and addresses a number of important EV challenges, including pricing, range anxiety, gaps in the infrastructure for charging, and charge times. ...

Innovation Center Iceland is leading in research and development with companies and other partner bodies within Iceland and abroad, highlighting the benefits of the cooperating partners.

The current research on manufacturing data for lithium-ion batteries is still limited, and there is an urgent need for production chains to utilize data to address existing pain points and issues.

Why RU?

New specialised facilities are currently being developed at UI for testing batteries. Once these facilities are in place, the research team will be better equipped to evaluate the condition of cells and develop solutions in a ...

Do you want to conduct research in the battery area but do not know how to finance it? We can help you with your research application and support you in your work.

The project develops novel technologies to convert silicon-containing industrial side streams into battery-grade silicon, suitable for use in lithium-ion battery anodes.

Battery research and development iceland

When you think about energy storage batteries in Iceland, your mind probably jumps to Viking legends before lithium-ion tech. But here's the kicker: this Arctic island is quietly becoming a laboratory for ...
