---

China is set to have more solar power capacity than coal for the first time this year, marking a "historic" milestone in the country's energy transition. Data released on Monday by a ...

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest economy breaks further records with its rapid buildup of...

China's total installed power capacity is forecast to reach about 4.3 terawatts by the end of 2026 as China expects 300 GW to come from primarily wind and solar.

This review further proposes a strategic roadmap for sustainable development, emphasizing the integrated deployment of wind and solar as the dominant sources of power generation.

China's 1.4 TW operating solar and wind outstrips thermal power In Q1 2025, China's wind and solar capacity surpassed its thermal (coal and gas) capacity for the first time, supplying nearly 23% of the ...

Coordinate energy cooperation with key countries and regions, including promoting practical energy cooperation between China and Europe, deepen cooperation with the countries along the Belt and ...

China has been the largest global market for wind and solar power for many years, having built the world's most complete industrial chain layout. Its output and exports of products such ...

SINGAPORE, April 25 (Reuters) - China's wind and solar power generation capacity surged to 1,482 gigawatts by the end of March, exceeding fossil fuel-based thermal power capacity for...

China reached a significant renewable energy milestone in April, with wind and solar power together generating 26% of the country's electricity, marking the first time these sources have supplied more ...
