The residential segment plays an important role in Europe's solar market, accounting for roughly 24 percent of the European Union's cumulative solar capacity.

For the first month in history, solar energy was the main source of electricity generated in the EU. In a huge victory for green energy, more than half of net electricity generated in the...

The revised Energy Performance of Buildings Directive will speed up the uptake of solar photovoltaics and solar thermal - both on residential and non-residential buildings - and increase the possibilities ...

BRUSSELS/BERLIN, July 24 (Reuters) - The European Union's expansion of solar energy is on track for its first annual slowdown in more than a decade, industry data showed on Thursday, as...

As the EU's Green Deal accelerates, rooftop solar and battery storage have become central to household energy transformation. European governments offer tax breaks, direct ...

The EU has doubled its solar capacity in the last three years. How have subsidies made this possible, what support is still available, and what still needs to happen?

The "Plug & Play" model is empowering renters to generate and consume their own electricity, backed by a €13.2 billion subsidy package, driving Europe toward a 40% distributed solar ...

Install Solar PV (photovoltaic panels) in your home with grant support from SEAI. Reduce your energy costs by generating your own renewable electricity.

For the first time, solar became the EU's largest single generation technology in June 2025, providing 22% of total power output. Together, wind and solar are set to deliver over 30% of ...

EU government installs solar power generation for home use

In June 2025, solar was the largest source of EU electricity for the first time, with multiple countries producing record amounts of solar power. Wind power in the EU started the summer ...
