-----

AWS Elastic Load Balancer (ELB) automatically distributes incoming application traffic across multiple targets, such as Amazon EC2 instances, containers, IP addresses, Lambda functions, and virtual appliances.

Elastic Load Balancing (ELB) automatically distributes incoming application traffic across multiple targets and virtual appliances in one or more Availability Zones (AZs).

Elastic Load Balancing (ELB) distributes incoming traffic across multiple EC2 instances. It acts as a single point of contact, spreading requests evenly so no single instance gets overloaded.

What is a Elastic Load Balancer in AWS? Modern applications serve millions of requests daily, handling everything from simple web pages to complex API calls that power mobile apps and enterprise systems.

What is Amazon ELB? Amazon Web Services' Elastic Load Balancer (AWS ELB) integrates seamlessly with Amazon's other cloud services. AWS ELB spins up new ELB instances without manual ...

What is AWS ELB? AWS ELB (Elastic Load Balancing) is a service that automatically distributes incoming application traffic across multiple targets, such as EC2 instances, containers, and IP addresses. It helps ...

Elastic Load Balancing automatically distributes incoming application traffic across multiple targets, such as Amazon EC2 instances, containers, and IP addresses.
