-----

China's cumulative power-sector energy storage capacity reached 213.3 GW by the end of 2025, up 54% year on year, according to data from the China Energy Storage Alliance (CNESA)...

China's new energy storage capacity has exceeded 100 million kilowatts, marking a major milestone in the nation's transition toward a new-type energy system and consolidating its ...

China's new-type energy storage market witnessed a strong start in January 2026. Newly commissioned capacity in January increased by over 60% year-on-year, while the market's ...

Carbon Brief explores how China has been driving the energy storage sector forwards and how it fits into the nation's wider energy transition.

As with renewables, China is leading the way: The country's installed capacity will account for about 43 per cent of total global capacity, BNEF data ...

The cumulative installed capacity of new energy storage in China is expected to exceed 100 gigawatts (GW) by 2025, according to the Energy ...

As China accelerates the deployment of renewable energy, the stability of the power system faces persistent operational constraints. Energy storage, serving as a pivotal enabling ...

In China, generation-side and grid-side energy storage dominate, making up 97% of newly deployed energy storage capacity in 2023. 2023 was a ...

The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage - primarily lithium-ion battery ...

China is looking to almost double its so-called new energy storage capacity to 180 gigawatts (GW) by 2027,
