The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth. SolarPower Europe's latest analysis highlights record installations, policy momentum, ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

At some times in spring, as much as 60 per cent of Spain's electricity comes from the sun. That has enabled Spain to slash its use of gas and coal-fired power stations. Consumers have ...

Solar panel installations in Europe have declined for the first time since 2016, raising fresh concerns about the continent's ability to meet its 2030 targets, according to SolarPower Europe.

The current trend suggests that Europe will fall short of its goals, hosting 723 GW of solar PV by 2030, compared to the required 750 GW. The analysis comes as solar's performance for ...

BRUSSELS/BERLIN, July 24 (Reuters) - The European Union's expansion of solar energy is on track for its first annual slowdown in more than a decade, industry data showed on Thursday, as some...

Compared to the sluggish residential PV market, the European commercial and industrial (C& I) PV sector experienced a slight increase. Among EU member states, nearly 20 countries saw ...

Solar provided more power than coal did to EU countries for the first time last year, marking a new milestone in the unstoppable rise of renewables. The sunlight-soaking renewable ...

While solar photovoltaic (PV) installations are booming in Europe (and in other parts of the world), the local industry is closing down. In 2023, an estimated total of nearly 60 gigawatts (GW) of new solar ...

Europe cancels solar photovoltaic power generation

Solar is the fastest growing energy source in the EU and is cheap, clean and flexible. The cost of solar power decreased by 90% between 2010-2023, according to the International Renewable Energy ...
