The proliferation of solar and wind power plants in Brazil has created imbalances between supply and consumption that caused operational ...

In this article, we will delve deeper into Brazil's dynamic energy landscape, compare it with Europe's prominent electricity providers, and highlight the significance of sustainable energy ...

The push for new solar and wind projects indicates a strategic diversification from the historically heavy reliance on hydropower, complementing Brazil's admirable pursuit of low-carbon electricity. This ...

To stay aligned with the 1.5°C target, Brazil must maintain at least the same pace of annual wind and solar capacity additions over the remainder of this decade as in ...

Although Brazil has one of the largest capacities for renewable energy generation in the world, its dependence on hydroelectric plants makes it ...

Brazil's wind power industry is facing one of the most severe crises in its history, according to the executive president of trade group Abeeólica, ...

Brazil's wind and solar energy industries, once seen as models for clean power, now face their biggest crisis in two decades.

Brazil has made big strides encouraging companies to invest in wind, solar and other renewable power generation sources, offering generous ...

Historically, Brazil has lacked investment in new grid infrastructure, particularly in remote areas where the potential for renewable energy ...

Europe lacks wind and Brazil lacks water for power generation

Brazil's successful diversification of its electricity mix in recent years means that wind and solar power are now able to compensate for the shortfall in hydro power without risking costly fossil ...
