-----  
What is a D-curve breaker?

D-curve breakers are suitable for circuits with high inrush currents, such as motors. They handle 10-20 times the nominal current. D-curve breakers are more sensitive to tripping than B- and C-curve breakers, making them unsuitable for circuits with low inrush currents.

What is a D-trip circuit breaker?

Breakthrough current is the maximum current that the circuit breaker can safely stop in the event of a short circuit. D-trip circuit breakers prevent nuisance tripping, so they are best for equipment that has a high spike in current at startup, such as transformers, power supplies, and heaters.

How to choose a circuit breaker from Klinkmann store?

From Klinkmann Store, you will find high-quality and safe Chint and Rockwell Automation circuit breakers suitable for various applications. The selection of a circuit breaker depends on the specific electrical installation and its requirements. We always recommend consulting a qualified electrician to ensure the correct choice of breaker.

What is a C-curve breaker?

C-curve breakers are commonly used to protect circuits with devices that have a relatively low inrush current, such as lighting, outlets, household appliances, and small machinery. These breakers handle 5-10 times the nominal current and react slower to overloads and short circuits compared to B-curve breakers, as their tripping current is higher.

FMX Miniature Circuit Breaker, UL 489, 240 VAC, 10 kA, 3-Pole, Box Lug Terminal, D Curve, 50A

Find d curve circuit breakers for reliable protection. Schneider and other top brands offer miniature circuit breakers with advanced features. Shop now for quality!
