What are the different types of PV brackets?

PV brackets can be divided into three types: fixed, tilt-adjustable, and auto-tracking type, and its connection method generally has two forms of welding and assembly. Among them, fixed-type bracket includes roof-type bracket, ground type bracket, and water type bracket.

How many PV modules can be arranged on a single-ground column bracket?

Single-ground column bracket needs only one column to support a square array unit. As the whole square array only needs column support, the number of PV modules that can be arranged on a single set of frames is less, generally 8, 12, or 16.

How many PV modules can be arranged in a square array?

As the whole square array only needs column support, the number of PV modules that can be arranged on a single set of frames is less, generally 8, 12, or 16. It mainly consists of columns, longitudinal beams, guide rails (beams), module presses, guide rail connectors, bolt washers, nut sliders, and other components.

What are the different types of roof brackets?

Roof type brackets are usually classified into three types, including color steel plate roof brackets, pitched roof (tile roof) brackets, and flat roof brackets. Color steel plate roof bracket consists of color steel plate clamps or fixings, rails (beams), component presses, rail connectors, bolts and washers, slider nuts, and so on.
