The global switch to renewable energy has passed a "positive tipping point" where solar and wind power will become even cheaper and more ...

Researchers plugged data from 70 global regions into an energy-simulation model to forecast how 22 technologies, from geothermal energy to ...

A new study predicts that solar power will become the world's dominant energy source before 2050, even without aggressive climate policies. ...

NEW YORK -- The global switch to renewable energy has passed a "positive tipping point" where solar and wind power will become even cheaper and more widespread, according to ...

We find that, due to technological trajectories set in motion by past policy, a global irreversible solar tipping point may have passed where solar energy gradually comes to dominate ...

The study, based on a data-driven model of technology and economics, finds that solar PV (photovoltaics) is likely to become the dominant power source before 2050 - even without ...

Solar power now is 41% cheaper and wind power is 53% cheaper globally than the lowest-cost fossil fuel, the reports said. Fossil fuels, which are the chief cause of climate change, ...

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers ...

A new paper in the journal Nature Communications finds that a global irreversible solar tipping point may have passed where solar energy ...

The United Nations reports a global shift toward renewable energy, calling it a "positive tipping point."

Global solar power critical point

Tuesday's U.N. reports reveal that 92.5% of new ...
