Can wind power a home?

Wind can absolutely be used to power a home. Most residential wind turbines are used as supplemental power sources to lower a house's dependency on the energy grid and lower energy bills. Wind as a residential power source is often combined with other renewable energy sources to make up the whole energy profile, namely solar.

Can wind be used as a residential energy source?

Wind as a residential power source is often combined with other renewable energy sources to make up the whole energy profile, namely solar. This combination works well because solar and wind are both intermittent energy sources meaning they don't provide consistent amounts of energy 24 hours a day. Energy storage is also an option.
