Behind those harmless-looking solar panels harnessing the sun's power lies a disturbing secret: Roughly 80% of solar components are manufactured in China using slave labor.

Paradoxically, the states most likely to do this are some that would greatly benefit from solar power, like Oklahoma, Kansas, and Nebraska. This article will list all the states with the largest ...

In June 2024, the U.S. International Trade Commission found that imports of c-Si cells and modules from Vietnam, Malaysia, Thailand, and Cambodia may be harming the U.S. solar panel ...

This article delves into the implications of these human rights issues on international supply chains for solar panel production, highlighting the challenges countries face in balancing ...

For each state, we created an overview of current and past state law on the placement and regulation of wind and solar power, and a list of counties that currently have blocks.

Lower power bills, cleaner energy -- everybody wins. Well, almost everybody. Unfortunately, many solar panels imported into the United States are the product of slave labor in ...

The Walk Free analysis, the fifth Global Slavery Index the group has published, suggests that G20 countries are importing \$14.8 billion in solar panels that may have been made with forced ...

The U.S. Government, companies, consumers, and civil society organizations are working to prevent solar panels and other solar materials tainted with forced labor from Xinjiang from making their way ...

While the industry is central to climate solutions, several investigations and human rights reports have revealed that the production of solar technology--especially polysilicon, a key material--has ...

This article examines the link between solar panel production and slave labour practices in Xinjiang, what

Illegal production of solar panels

countries are doing about it and the impact on accused solar brands.
