further investments in renewable energy. This solar system is the largest operating solar power system in Vietnam, and also the first and largest system of Intel Corporation in Asia, highlights our ...

Intel (INTC) has installed solar panels at a facility in Rio Rancho, New Mexico to test the potential for using photovoltaic solar energy to provide power for data centers.

The solar project, which began in 2020, contributes about 15% of Intel's global, on-site solar photovoltaic electric power capacity. It will also reduce carbon dioxide emissions by about 3,800 tons.

Accelerate the incorporation of alternative energy sources into the modern energy grid with Intel's technologies that enable near-real-time monitoring and analysis of energy data to improve data ...

Apr 22 - US-based semiconductor manufacturer Intel Corp said today its Malaysian operations are now harnessing solar energy to help power its six buildings across its Kulim and Penang campus and that ...

In 2022, Intel achieved 100% renewable electricity in the US, European Union, Israel, and Malaysia, and is approaching 100% in Costa Rica--bringing the global total to 93%.

The project is claimed by Intel to be among the largest private solar panel installations in California and among the top-10 in the U.S. Intel's no slouch when it comes to renewables uptake.

It is still much too early to determine whether IBM, Intel and HP will be as successful creating a mass market for solar energy on par with what they did for computers.

The company has installed more than 8,000 solar parking spots worldwide. New solar projects are planned or underway at many Intel campuses, including those in Ocotillo; Chandler, ...

Intel's Malaysia operations will be using solar energy to help power its six-buildings across its Kulim and

Intel Photovoltaic Panel

Penang campus, making it Intel's largest solar farm outside of the U.S.
