Can I install my own solar panels?

Installing your own solar panels can be legal and cost-effective, but navigating the regulations requires careful planning. Most states allow homeowners to install solar panels themselves, provided they obtain proper permits, follow local building codes, and pass required inspections.

Should you install solar energy in your home?

Before beginning a DIY project, remember that installing solar can be dangerous without experience and even illegal when performed outside of local regulations. With the expertise to protect your investment and property, you should almost always consult a professional when thinking about home solar energy.

Can solar panels be installed on a roof?

To get the most out of your system, ensure your home can accommodate solar panels before installing them on your roof. Your roof's shading, orientation and angle towards the sun, and age contribute to its potential for generating solar energy. In a perfect world, your panels would face south and tilt between 15 and 40 degrees.

Where should I put my solar panels?

The place you install your solar panels matters. Here are the most common places to put your panels, and areas to avoid. Rooftops are the most common places you'll see solar panels, but you have other options too. Installing solar panels can be a great leap toward electricity cost savings and energy efficiency.

If you have enough space, you can install solar panels in your backyard and generate just as much, if not more power, than you would with rooftop solar panels.

Are you considering installing solar panels on your home but unsure of the best way to proceed? Installing home solar can bring numerous benefits, including a reduction in energy...

Where to Install Your Solar Panels (And Where You Shouldn't) The place you install your solar panels matters. Here are the most common places to put your panels, and areas to avoid.
