-----

Electricity is defined as the flow of electric charge, primarily electrons moving through a conductor. Its primary function is to power countless devices and systems by converting energy into usable forms.

Electricity is the flow of electrons, which is a basic and widely used form of energy. Most electricity is generated by converting primary energy sources like coal, natural gas, and nuclear power.

The energy sources we use to make electricity can be renewable (such as wind or solar) or non-renewable, but electricity itself is neither renewable nor non-renewable.

Electricity is a form of energy that exists through charged particles like electrons and protons. It is integral to almost every facet of modern life. Electricity powers our homes, phones, ...

Electricity is the set of physical phenomena associated with the presence and motion of matter possessing an electric charge. Electricity is related to magnetism, both being part of the ...

Electricity, phenomenon associated with stationary or moving electric charges. Electric charge is a fundamental property of matter and is borne by elementary particles. In electricity the ...

Electricity is the flow of electrical power or charge. Electricity is both a basic part of nature and one of the most widely used forms of energy.
