How long does a portable power station last?

A portable power station's lifespan depends on the type of battery inside. Most new portable power stations, including all the models we recommend here, feature LiFePO4 battery technology, which lasts far longer than older lithium-ion technology. How much more? LiFePo4 power stations will last for more than 3,000 charge cycles, or about 10 years.

How much power does a portable power station need?

Small devices like a laptop and coolers tend to need around 60 to 100W of continuous power whereas appliances like fridges can need up to around 800W. So, a large portable power station with a higher output is best for powering large devices, or more devices at once.

How do I choose a portable power station?

A portable power station's maximum output tells you the total watts it can produce, which determines what you can and can't power with it. Look for a power station that can handle the combined wattage of the electronics you plan to plug into it.

Why do you need a portable power station?

Why Trust Us? Portable power stations are handy for backup power during outages, off-grid electricity for an RV, or simply charging your laptop and phone while working remotely. They're effectively large bundles of rechargeable lithium-ion batteries, which provide a quiet, exhaust-free alternative to noisy gas-powered portable generators.

MEGA Power Box is ideal for charging smartphones, tablets, radios and operating DC powered electronics. Great for Off-Grid applications and portable emergency back-up power. includes built-in LED lights. Proudly
