Global demand for energy storage is surging. Lithium-ion leads today, but new contenders like sodium-ion, flow, and gravity systems are shaping the future grid.

NLR research is investigating flexibility, recyclability, and manufacturing of materials and devices for energy storage, such as lithium-ion batteries as well as renewable energy alternatives.

In order to realize this potential, the United States must significantly invest in domestic clean energy manufacturing, including support for energy storage supply chains from raw material production to ...

Chinese authorities unveiled several measures on Monday to promote the new-type energy storage manufacturing sector, as part of efforts to accelerate the development of emerging ...

China has unveiled an action plan to boost full-chain development of the new-energy storage manufacturing industry, aiming to expand leading enterprises by 2027, enhance innovation ...

Innovations in energy storage -- the capture of energy produced at one time for later use -- can protect against supply chain disruptions, reinforce the grid and foster U.S. manufacturing ...

To establish public-private partnerships that address manufacturing challenges for advanced battery materials and devices, with a focus on de-risking, scaling, and accelerating adoption of new ...

The industry is building 25 new or expanded manufacturing facilities to support the grid-scale energy storage market, with 11 already in operation or under construction.

By exploring energy storage options for a variety of applications, NLR's advanced manufacturing analysis is helping support the expansion of domestic energy storage manufacturing ...

New Energy Storage Supporting Manufacturing

Chinese battery manufacturer EVE Energy has secured a contract with the Malaysian government to deploy an AC/DC integrated 36MWh solar-plus-storage system at Kuala Lumpur International Airport ...
