Do ring solar panels work with a battery?

Ring solar panels only work with Ring devices that come with a battery. If a device has no battery, the Ring solar panel can't be used with it. When you choose the Wired mode during installation, the Ring app might treat the device as a wired device and, as such, not recognize the solar panel when it's connected.

Do I need a solar panel for each ring camera?

Yes! You do need one solar panel for each Ring camera. Solar panels and chargers are made to work with just one device at a time. So, if you want to use the solar option for multiple cameras, you'll need a separate solar panel or charger for each camera. Each camera needs its own sunny buddy to keep it charged and running.

Are ring solar panels weatherproof?

Absolutely! The weatherproof connector on Ring solar panels is designed to be safe to use even when it's raining. It's like having a raincoat for your device, so you don't have to worry about the weather affecting it. Whether it's sunny or rainy, your Ring solar panel will keep working just fine.

Why does ring not recognize a solar panel?

When you choose the Wired mode during installation, the Ring app might treat the device as a wired device and, as such, not recognize the solar panel when it's connected. So, when installing a Ring device with which you'd use the solar panel, choose Battery Mode and not Wired.
