Prices for modules continued their climb in May on strong demand and limited supply, while inverter prices edged down. The PV Purchasing Managers' Index held firm as brand ...

Module prices in 2025 may not surge--but they will likely not fall much further. We welcome your thoughts and feedback, and are happy to share more front-line insights in the future.

Following the supply shortage at the start of 2022 and the subsequent oversupply in 2022-23, Gilligan says that the inverter market - and the wider solar market - is entering its...

Somewhere in the tumult of the global economy in recent months, solar panel prices hit bottom and then began to rise. The oversupply that helped to push prices down last year has eased...

The Peoples Republic of China (PRC) dominates the solar inverter supply chain, causing the U.S. to be vulnerable to supply chain disruptions and creating national security risk.

Wood Mackenzie's October 2025 analysis confirms that PV module prices are jumping approximately 9% in Q4 2025, with further increases expected through 2026. This isn't a temporary blip. It ...

Solar inverter prices have been on the rise, with crucial components such as semiconductor chips in short supply globally, and compounding this challenge is the acute shortage ...

Each presentation focuses on global and U.S. supply and demand, module and system price, investment trends and business models, and updates on U.S. government programs ...

Some analysts expect the solar PV semiconductor market to grow by 20% every year until 2032, when the market is estimated to be valued at over \$1,377 billion. But semiconductor ...

Photovoltaic prices rise and inverter chips are in short supply

It's no secret that prices throughout the solar supply chain have been at rock bottom over the past 18 months.
