Dewesoft measurement solution covers a wide array of applications for testing and monitoring wind power plants. All tests described in the IEC61400 standard (Power Performance, Power Quality, ...

Research, testing, and certification of these wind turbine components are important steps in validating wind turbine component design, performance, and adherence to safety standards.

Our algorithms process wind farm data, analyze incident occurrences, and correlate them with wind and production records to identify the components (pitch, alarms, generator, etc.) responsible for ...

In addition to visual inspection, we carry out special inspections and measurements, including power unit endoscopy imaging, alignment measurements, thermal imaging and vibration measurements.

Inspections can cover all components of wind power generation systems including the rotor, nacelle, tower, foundation and electrical system. We can inspect both onshore and offshore facilities - ...

Dewesoft measurement solution covers a wide array of applications for ...

determine the installation location's basic wind rating speed. While most of the United States has a basic wind rating speed of 110 miles per hour, special regions, particularly along the Atl. ntic and Gulf ...

Facing a highly competitive deregulated market and continuous deterioration of unit performance, a Mississippi power plant selected ABB to audit its existing instrumentation and control system.

Partner with HQTs to ensure that the wind turbines, equipment and all components you source are built to the required safety and quality standards.

Our exceptional team and global infrastructure support the entire lifecycle of your projects throughout the

Power plant wind rating external audit equipment unit

capital value chain. TÜV SÜD"s advisors combine practical onshore wind, offshore wind, wave and ...

We work with more than 500 experts in over 140 countries, helping stakeholders navigate compliance complexity and mitigate compliance risks for wind turbines, peripheral ...
