Plain Language Summary Solar power is a key renewable source to support the formidable target of carbon neutrality in the coming decades. However, the supply and demand of solar power are both ...

The U.S. Department of Energy (DOE) estimates that solar equipment shortages could reduce solar PV deployment by 12-15 gigawatts (GW) over the next year, equivalent to the electricity needs of more than 2 ...

As the global demand for renewable energy continues to surge, particularly in developing tropical regions striving for carbon neutrality, a concerning trend has emerged: solar power shortages.

Power shortages are coming thanks to wind and solar subsidies. Here's how they distort energy investment.

This article explores why the solar industry is struggling, what it means for the clean energy transition, and how governments and homeowners can adapt. From climate impacts to battery storage, ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest-growing source of ...

Solar power droughts are driven by a combination of soaring temperatures that increase demand for cooling and inclement weather or light-blocking pollution that suppresses power generation,...

Under current supply chain conditions, the United States is on track to fall significantly short of surging demand for three clean energy sources: wind, solar, and battery. The shortage is due to the scarcity ...

Cloudy outlook for solar power? Heat, weather and pollution cause power generation shortages. Credit: Piergiuliano Chesi. AGU is gathering stories of impact to share with leaders and policy makers.
