-----

Red bricks -- some of the world's cheapest and most familiar building materials -- can be converted into energy storage units that can be charged to hold electricity, like a ...

Energy storing bricks are a novel form of concrete that aims to transform ordinary bricks into devices that can store electricity and power devices. It uses a chemical process to ...

Researchers at Washington University in St Louis have developed a supercapacitor brick, using a chemical process that converts ...

In the PVHide research project, a team of scientists has developed a brick-red photovoltaic system, and together with industrial ...

Integrated into walls and coupled with solar panels, the devices could provide emergency power and lighting in case of power ...

Now, chemists in Arts & Sciences have developed a method to make or modify "smart bricks" that can store energy until required for ...

Scientists have found a way to turn classic bricks into electrical storage devices. Red bricks are one of the strongest building materials that have ...

Now a team of researchers say a classic construction material--the red fired brick--could be a contender in the quest for ...

Experimental investigation on the performance of conventional and modified solar stills with the addition of hollow red-bricks pieces with different heights in terms of daily ...
