Will Athens generate 82 percent of its electricity by 2030?

On Friday Greece submitted its new climate plan to the European Commission for approval, which will see Athens generate 82 percent of its electricity from renewable sources by 2030, compared to the previous target of 66 percent in the 2019 plan, Reuters revealed.

How will Greece shape the future of renewable gases?

In a significant step towards shaping the future of renewable gases in Greece, the Ministry of Environment and Energy enacted a new law on 4 July 2025, establishing the country's first comprehensive regulatory framework for the production and integration of biomethane and renewable or low-carbon hydrogen.

Does Greece have a high share of renewables in its electricity mix?

In 2024, Greece maintained a consistently high share of renewables in its electricity mix, underscoring both policy continuity and investor confidence.

Why does Greece need green electricity?

With energy being the largest operational cost, the availability of affordable, green electricity is now a key driver. Greece's push for renewables, grid upgrades, and green PPAs is enhancing its attractiveness, especially in synergy with cross-border projects like the GREGY interconnector with Egypt.

The renewable energy sector in Greece has experienced exponential growth, with a record 2.5 GW of new photovoltaic (PV) capacity installed in 2024. This milestone generates ...
