Western professor Joshua Pearce collaborated with professional shepherd Rafael Lara on a study that shows the profitability of "solar" sheep, raised specifically to trim grass and weeds under ...

Sheep grazers are helping provide energy stability in the United Kingdom while benefiting from free solar farming.

Solar grazing is a form of agrivoltaics—a land use strategy that combines renewable energy production with livestock grazing. On solar farms, sheep graze beneath and around the ...

Solar shepherds, who manage sheep grazing under solar panels, are part of a growing movement that combines agriculture and renewable energy -- and offers high incomes in the process.

Join our unique solar grazing community that connects farmers and solar companies to access key resources and technical assistance. Learn from those working at the cutting edge of solar ...

At New South Wales' Wellington Solar Farm, a multi-year trial compared sheep grazing under photovoltaic arrays with those on open pasture, asking whether clean power and livestock can ...

Solar grazing is an innovative practice gaining momentum across the United States, where sheep graze beneath and around solar panels on solar farms. This dual-use approach not only supports clean ...

Solar grazing is the practice of using sheep to manage vegetation at solar energy sites. Solar farms need regular maintenance to keep grass, weeds and brush from growing too high and ...

Agri-voltaics is particularly beneficial when working alongside small ruminant farming industries because, unlike cattle, sheep are small enough to fit underneath ground mounted solar ...

Solar photovoltaic panels for sheep farming

Enel's award-winning solar grazing agreement puts 13,000+ sheep managing vegetation on solar farms, embracing agrivoltaics at industrial scale.
