As we consider the critical reforms in the reconciliation process, I rise today to make the case for why we must eliminate the generous federal subsidies for wind and solar energy, paid for by ...

Here's the truth: solar energy is the most cost-effective form of new electricity generation in the United States, even without subsidies. It's fast to deploy, requires no fuel, and delivers ...

Solar power has long been hailed as a clean and affordable energy source, yet the industry still heavily relies on trillions of dollars in subsidies and mandates to stay afloat.

Subsidies are meant to drive prices down and boost supply. But subsidizing wind and solar has done exactly the opposite.

The optimal solar subsidy accounts for the benefits society receives from consumers adopting solar power, which consumers do not consider when making their private adoption decisions.

Congressional Republicans passed the One Big, Beautiful Bill, which put the brakes on federal clean energy subsidies by terminating investment and production tax credits for wind and solar...

Similar to wind power, solar power is promoted by large federal subsidies and state mandates for renewable energy. Solar projects get a 30% investment tax credit from the Democrat ...

Congress is currently debating the fate of costly renewable subsidies within the Inflation Reduction Act, which would increase wind and solar power, causing utility rates to increase, and ...

The gap between government subsidies for wind and solar and those for reliable thermal power units like natural gas, nuclear, and coal is massive, and thanks to the Inflation Reduction Act ...

Solar power generation subsidies are not in place

Why isn't the sky falling for wind and solar? First, they are no longer the nascent technologies they were when they started receiving subsidies. The two renewable sources have ...
