How is water produced in solar multigeneration systems?

Water production in solar multigeneration systems generally employs two types of desalination systems.

How does solar energy affect water production?

h corresponding total and annual cost of the cogeneration system is raised with an amplitude of about 3.12%. In response to the change of the solar intensity, the high-est water production rises from 58.26 kg·h⁻¹ at 600 Wm⁻² to 92.67 kg·h⁻¹ at 1,000 Wm⁻², while the value of GOR, decreases to 2.49.

What is a dual-heated water and power cogeneration system (WPCs)?

novel dual-heated water and power cogeneration system (WPCS), in which photovoltaic/thermal (PV/T) is used for seawater heating and electricity generation, and solar collector is applied for air heating, based on the humidification-dehumidification (HDH) cycle, is proposed.

Can a solar-driven cogenerator increase energy exchange between water evaporation modules?

In summary, we have demonstrated a novel solar-driven cogenerator that employs the PIC effect to intensify energy exchange between its power generation and water evaporation modules, resulting in optimal efficiency for both power and water production.

To improve the Colombian energy matrix and capacity using innovative solar power generation methods, Moreno-Gamboa et al. (2020) investigated the performance of a combined ...

The HTF in the solar field, which transfers the solar heat to the power cycle, is usually synthetic oil, although it can also be molten salts, water steam in the case of designs of direct steam ...

To enhance power generation and highlight the importance of clean energy systems, Yadav et al. (2023) analyzed a combined power cycle with solar concentrated photovoltaic-thermal ...

This study provides insights into the design of power-water cogenerators and advances their application with multiple natural energy sources for high-efficiency power-water cogeneration.

This Review summarizes the recent progress in solar-driven steam generation in diverse functionalizations and

highlights its applications beyond water purification and desalination.

Inspired by the natural solar-driven water cycle--comprising evaporation, condensation, and precipitation--we designed an integrated system featuring a closed-loop solar water cycle, ...

novel dual-heated water and power cogeneration system (WPCS), in which photovoltaic/thermal (PV/T) is used for seawater heating and electricity generation, and solar ...

Multigeneration systems have huge potential in solving many of the energy and environmental challenges faced globally. This review investigated the production of power, ...

This study introduces a novel transcritical CO₂ pumpless Rankine power generation cycle based on the thermal compression concept, utilizing low-temperature renewable sources. The ...

A novel solar-assisted multigeneration system is proposed and examined from a thermodynamic perspective, designed to simultaneously produce electricity, distilled water, and ...
