-----  
Does Europe need co-located solar?

Ingeteam's Mauro Rivola discusses the rapidly growing appetite for co-located solar and storage in Southern Europe. Solar power generation in Central Europe has grown at more than twice the EU average rate since 2019, according to new figures.

Does a negative price in Italy undermine co-located solar storage?

Solar power generation in Central Europe has grown at more than twice the EU average rate since 2019, according to new figures. The absence of negative pricing in Italy undermines the case for co-located solar storage, the co-founder of Italian IPP Terrawatt has said.

Who is Sol-R Global Infrastructure?

SOL-R Global Infrastructure is a key partner to all parties in the solar farm value chain by bringing capital, expertise and solutions to issues relating to the ownership of land under energy producing assets. We operate in Europe with a focus on 9 countries : Spain, Italy, Greece, Portugal, Germany, Poland, the UK, Romania and France.

Is Turkey a major solar manufacturing hub?

Meanwhile Turkey is positioning itself as a major solar manufacturing hub with 15 GW of new cell production capacity under development. As adoption accelerates, energy storage is taking center stage as a crucial support for successful renewables penetration.

Southern Europe's Solar & Storage Hub Senior decision-makers from top developers, EPCs, banks, and investors driving the clean energy transition across Italy, Greece, the Balkans and beyond were in ...

Interest in co-locating solar PV with energy storage is increasing in Southern Europe, as grid curtailments and negative or near zero prices for solar PV become more frequent.

Energy storage solutions have become an integral part of Europe's renewable energy landscape, enabling greater stability and efficiency in solar power systems. From advanced battery ...

"Spain's regulatory landscape still incomplete": Nuveen on bankability in Southern Europe While steps are being taken, Spain still lacks the market mechanisms and regulatory framework for large-scale ...

This study investigates the role of different energy storage technologies in a European electricity sector that complies with the target of net-zero c...

Pairing battery storage with a south-facing (vertical) facade PV shifts energy from low-value midday exports to high-value evening consumption. This combination is transforming how ...

Why Southern Europe Leads in Solar Energy Storage Adoption With over 2,800 annual sunlight hours in regions like Spain and Italy, Southern Europe has become a hotspot for photovoltaic (PV) energy ...

A resilient and cost-efficient energy system requires both centralised and decentralised flexibility, making the reactivation of residential and commercial storage a priority. This edition of the ...

New Energy Storage Equipment in Southern Europe: Powering a Sustainable Future Southern Europe is leading a renewable energy revolution, with countries like Spain, Italy, and Greece adopting cutting ...

Sigenergy unveils next-gen solar and storage innovations to power Southern Europe's clean energy transition.
