The first practical silicon solar cell was created in 1954 by scientists at Bell Laboratories. It was the first solar cell efficient enough to power small devices and marked the beginning of modern ...

University of Delaware is credited with creating one of the first solar buildings, "Solar One," in 1973. The construction ran on a combination of solar thermal and solar photovoltaic power.

At the International Space Station, astronauts begin installing solar panels on what will be the largest solar power array deployed in space. Each "wing" of the array consists of 32,800 solar cells.

In 1883 a New York inventor Charles Fritts created the first solar cell by coating selenium with a thin layer of gold, creating a low impact solar cell and the start of photovoltaic solar panel innovation in America.

Flash forward to 1883, and the next big leap in solar energy is made -- New York inventor Charles Fritts created the first solar cell. This solar module consisted of a wide, thin selenium wafer covered by an ...

Explore the fascinating journey of solar energy from its ancient ...

In 1973, the University of Delaware was responsible for constructing the first solar building, named "Solar One." The system ran on a hybrid supply of solar thermal and solar PV power.

Using selenium, a non-metal element known for its photoconductive properties, Fritts created the world's first solar cell. He coated selenium wafers with a thin layer of gold to form a ...

In 1973, the University of Delaware was responsible for ...

Explore the fascinating journey of solar energy from its ancient beginnings to its modern applications and future potential. Discover how solar energy has evolved over time.

The earliest solar tiles

This new solar cell was publicly demonstrated on April 25, 1954. This development is a landmark in the history of solar energy, widely considered the birth of the modern solar panel and ...

Modern solar panels trace their origins to the 19th century, with the discovery of the photovoltaic effect by Alexandre-Edmond Becquerel and the development of silicon solar cells by Bell Labs in the 1950s.
