These data hammer the same powerful message: solar photovoltaic (PV) has become the new cornerstone of the global power ...

A new IEEE report shows solar dominated new generation in 2024, with 70% of added global capacity from PV and record installations in China and the United States.

At the end of 2024, solar was the second-largest source of U.S. generation capacity, though still a growing percentage of the U.S. electric generation mix. In 2024, solar ...

Find up-to-date statistics and facts on the global solar photovoltaic industry.

The collective growth of wind and solar PV generation exceeded the rise in global electricity demand in January-September, and ...

Dual-use applications such as agrivoltaics, floating PV, and infrastructure-integrated PV are becoming increasingly relevant, helping balance land ...

Solar power has evolved remarkably over the past few decades, transforming from a niche energy source to a mainstream solution for sustainable power generation. Solar power ...

The three main dispatchable sources of electricity generation (natural gas, coal, and nuclear) accounted for 75% of total generation in 2025, but we expect the share of ...

According to the U.S. Solar Market Insight 2024 Year in Review report released today by the Solar Energy Industries Association (SEIA) and Wood Mackenzie, solar and ...

It examines the current state of solar power and related academic solar energy research in different countries,

The mainstream of solar power generation today

aiming to provide valuable guidance for researchers, designers, ...
