Find up-to-date statistics and facts on the global solar photovoltaic industry.

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information ...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

Nearly 250 GWdc of solar will be installed from 2025-2030, but the sector has more potential Despite the changing market and policy conditions that the solar industry has faced this ...

We focus on identifying the existence of a tipping point for solar and wind, assuming that no further policy is adopted to usher in a solar and wind-dominated electricity system.

On Tuesday, the US Energy Information Administration released full-year data on how the country generated electricity in 2025. It's a bit of a good news/bad news situation. The bad news is ...

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers ...

"Record solar power growth and stagnating fossil fuels in 2025 show how clean power has become the driving force in the power sector," said ...

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to ...

More than 500 GWdc of PV installations are expected in 2025. At the end of 2024, China and the United

The real situation of solar power generation

States had collectively installed more than 1 TWdc of PV. In 2024, wind and solar ...
