15 NTT DoCoMo cut its operational carbon emissions by 20% since 2020, using AI-driven network optimization to reduce energy waste by 15% across its base stations.

From the magnificent Iguazú Falls to the glaciers of Patagonia, Argentina spans a vast territory and a population of almost 50 million who, like elsewhere in the world, are hungry for data, ...

In this paper we assess the benefits of adopting renewable energy resources to make telecommunications network greener and cost-efficient, ...

Espoo, Finland - Nokia today announced it has signed a comprehensive 5G deal with Claro Argentina (Claro) to deploy 5G infrastructure across the country. The agreement will cover the first phase of 5G ...

Telecom Argentina said it has already activated 68 5G antennas using the 3.5 GHz band in different cities across the country. The telco claimed to be the first operator in the country to launch ...

We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

Various green communication approaches such as BS hardware improvement, sleep mode technique, radio transmission, deployment and network planning (UAV-based) and energy harvesting have ...
