How can batteries help the Nordic energy grid?

Support for intermittent renewables: With the increasing share of solar and wind power in the Nordic energy mix, batteries can store excess energy generated during peak production times and release it when renewable generation is low, further enhancing grid stability.

Why is the Nordic region a key energy storage provider?

With existing interconnections to the UK, Germany, the Netherlands, Poland, and the Baltics, the Nordic region already serves as a key energy storage provider for the rest of Europe. Many Nordic hydropower plants are upgrading their control systems to improve its responsiveness.

How many hours a day are high electricity prices in Nordic countries?

oAverage of 90 hours in Nordic countries in 2023 simultaneously, the number of hours with high electricity prices has risen significantly. Before 2021, there were only a few hours with prices exceeding 200 EUR/MWh, but these became much more frequent during 2021 and 2022 due to the energy crisis.

How much battery capacity will the Nordic countries have by 2030?

The Nordic countries are expected to have almost 1800 MW of installed battery capacity by 2030, not including batteries in electric vehicles. Figure 06.3: Expected battery capacity in the Nordics by 2030, not including batteries in electric vehicles.
