What is a home wind turbine?

A home wind turbine, otherwise called a residential or small wind turbine, is a device created to produce electricity for particular homes or small businesses by controlling wind energy. It's fundamentally a small variation of the large-scale turbines you observe in wind farms, scaled down for domiciliary use.

Does your home need a wind turbine?

Your home might benefit from a residential wind turbine if you want to reduce your carbon footprint or lower energy costs. The data shows 19.3% of the U.S. population lives in rural areas with enough land to support a home wind turbine system.

How much does a home wind turbine cost?

Home wind turbines are ideal for rural and coastal areas as they have consistent wind speeds. The costs of home wind turbines vary from \$7,000 to \$70,000, with the possibility of saving \$641 per year. Home wind turbines provide energy independence, clean power, and lower electricity bills.

How does a home wind turbine work?

A home wind turbine transforms the wind power into electrical energy in a very straightforward yet effective process. When the wind blows, spin the rotor which drives a generator that is capable of generating clean energy, which can power your lights to your appliances.
