Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal,...

Renewables, such as wind and solar, supplied 5,072 terawatt hours (TWh) of electricity globally between January and June, surpassing coal's 4,896 TWh, Ember said. "We are seeing the ...

Together, wind and solar PV are projected to surpass fossil-fired power generation in 2025, assuming normal weather conditions in the second half of the year. As a result, the share of low-emissions ...

Clean power has reached a critical tipping point, with solar and wind now generating more electricity than coal globally. The combined output from global wind and solar power has, for the first ...

Renewable energy overtook coal as the world's leading source of electricity in the first half of this year - a historic first, according to new data from the global energy think tank Ember.

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, according to a new ...

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the global reliance on environmentally...

According to a report by climate think tank Ember, wind and solar power together outpaced coal generation in

Wind power and photovoltaic power generation exceed coal-fired power generation

the first half of 2025, driven largely by record solar expansion and steady...

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning point for the global power system, according to research.
