-----

China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity ...

According to a country analysis brief released by the Energy Information Administration in May of 2025, China added 76 gigawatts of wind energy in the year 2024 alone. As a matter of fact, ...

The targets for 2023 were: The total installed capacity of wind power should reach 430 GW and the increase in installed capacity of wind power and photovoltaic power by about 160 GW.

From steppe to power source, China's wind energy sector is revolutionizing the country's electricity supply and taking on a global leadership role. With its vast landmasses in the north and an...

China's floating offshore wind prototypes The global deep-sea floating offshore wind is still in the pilot demonstration stage. By the end of Sept. 2024, 5 semi-submersible wind turbines have been ...

China is racing to develop a new generation of wind farms that can not only survive tropical cyclones, but also harness their power.

Meiqiao Town wind farm is an operating wind farm in Meiqiao, Xiangxiang, Xiangtan, Hunan, China.

This project includes 200 MW of wind power, with 40 units of 5 MW wind turbines from Dongfang Electric, and is the world's largest single-capacity wind-solar-storage integration project in an ultra ...

China has successfully completed the first flight of its home-designed floating wind turbine, the S1500, in Hami, Xinjiang. The system passed strict tests, including full desert assembly ...

Alongside wind and solar, the country will orderly advance major hydropower projects, actively and safely develop nuclear power, and improve the clean and efficient use of fossil fuels, ...
